

biodek  
disinfezione ad alto livello

## You win the battle against the elements nosocomial pathogens with Biodek.

Our unique, fast and flexible system can be used to fight active infections or to prevent its occurrence in all areas subject to microbiological contamination.

- It is designed to be used in operating theaters, intensive care unit (ICU), mortuaries or any room where sterility is necessary;
- It is active on biofilm;
- It is used by air which is fast and Safe to 99.99%;
- It is spread evenly on all surfaces, even those not directly exposed to the jet device;
- It is effective in removing viruses, bacteria and spores;
- It leaves no residue and does not need to be rinsed or dried;
- It is non-toxic;
- It is bio-compatible;
- It is convenient and at competitive prices;
- It provides a thorough disinfection.

## Biodek is the most convenient solution: no need to invest capital!

With Biodek you do not need to purchase any expensive equipment. This results in insignificant savings in terms of maintenance and instrumental maintenance or upgrades and internal staff training. The Biodek system is able to demonstrate actual savings on implemented processes, either by reducing down time, both by reducing the number of personnel necessary to obtain the decontamination work.

### Biodek Service

The service of total disinfection can be provided in two ways:

**Biodek emergency service:** It works 24/7 at home in case of microbiological contamination emergencies, for the restoration of a sterile environment in case of outbreaks.

**Service Biodek maintenance:** It is used as a prophylactic tool in infection prevention and abatement control of microbial air and surfaces.

Comunicazione rivolta a operatori sanitari.

**Making hospitals acquired infections, a problem of the past: This is the mission of Biodek.**

Biodek is mainly used for the removal of Microbiological air and surfaces contamination in pharmaceuticals field, biomedical, biotechnology, of the animal care and generically insensitive environments to biological contamination. Biodek has developed a unique system, fast and flexible to offer the most effective method of disinfection of environments and surfaces, ideal for crowded hospitals with high employment.

The Biodek decontamination system, using the active ingredient of hydrogen peroxide, is effective in the removal of viruses, bacteria and spores, responsible for most of the hospital-acquired infections, including influenza, MRSA and Clostridium Difficile.

**The Biodek decontamination system may be delivered in a few minutes. It takes just 2 minutes to decontaminate an environment of 50 cubic meters!**

The Biodek decontamination system produces a "dry mist", made up a vapor of hydrogen peroxide, non-toxic, bio-compatible and that leaves no residue! Environments that are discussed, including in-patient wards, operating theaters, wards resuscitation and morgues, can be re-occupied in less than two hours.

**Sensitive medical devices can be left in the environment during the delivery process.**

The sensitive medical equipment and all the instruments of labor are not affected by the dry steam. This allows, during the treatment, to leave each working tool facility or machinery so to allow the concomitant decontamination. You Kill the maximum with the minimum time and minimum cost.
